In the Specification

Please amend ¶ 0062 of the specification as follows:

[0039] The powdery film forming material can be ~~recharged~~
precharged with triboelectric charging, corona charging, or
charged in situ. Precharging strengthens the impact of the
electric field on the powder.

[0062] The substrate is led to a nip formed between two
counter rolls 9, 10. The roll ~~[[10]]~~ 9 may be a resilient roll and
the roll 10 may be a hard heated roll. The granular layer is
melted in the nip to form an even substantially impermeable
film. A ready product is wound to the reel 11.
